

ESG on traffic and waste oil as fuel

The ESG welcomes the announcement by Slop Oil Reception and Treatment Ltd, (SORT) that they are prepared to receive and treat smaller quantities of waste oil from the local community. It is a positive step towards reducing pollution and encourages recycling of resources.

The ESG believe that waste oil is a serious problem in Gibraltar and considers this offer could represent a real solution. Our local authorities could explore the best way of facilitating getting the waste oil from the public to the depot and the ESG will be taking the matter up with Govt.

Furthermore, the ESG, as recently as a few weeks ago, was highlighting the huge gains to be made from re-using chip fat oil to run your car!! This example was one of several ways in which treated waste oil can be truly recycled. The ESG will be making direct contact with the company concerned to discuss the more technical aspects of the whole process and explore the possibilities of converting any treated oil to re-useable fuel.
